

MONTGOMERY ALPHA PLUS FUND

INVESTMENT REPORT & FACT SHEET

FUND OVERVIEW

The Montgomery Alpha Plus Fund offers investors an Australian equity market neutral strategy that harnesses the benefits of a repeatable investment process while seeking to produce higher risk-adjusted returns over the medium term - irrespective of market conditions.

By simultaneously managing long and short portfolios of similar size, The Fund aims to reduce or eliminate the risks typically associated with extreme market gyrations.

The Fund aims to achieve returns that exceed the RBA cash rate by 6-8 per cent per annum after fees and targets a lower level of volatility than the overall Australian equity market.

Typically The Fund will hold 15-35 long positions and 15-35 short positions of equal value.

FUND COMMENTARY

July was a terrible month for The Montgomery Alpha Plus Fund (The Fund). The business quality and other factors that govern The Fund's stock selection generally had negative returns for the month, meaning that a majority of stocks in The Fund's long portfolio underperformed, and a majority of stocks in The Fund's short portfolio outperformed.

This divergence results in negative overall performance for The Fund. We anticipate that the types of business quality, cashflow, valuation and other factors applied in stock selection will deliver positive returns on average over long stretches of time, but are acutely aware that the experience of the first 12 months of The Fund's life has been the opposite.

As we noted in the annual letter recently sent to investors in The Fund, it is important to keep in mind that a year is not a long time in equity investing, and there will invariably be years when the wind is behind us and years when it is not.

Having said that, we recognise that it will take some time for The Fund to recover the drawdown of the past year and begin to deliver positive returns.
